

71%
of ITDMs would sacrifice
productivity for security

While recent trends like the consumerization of IT and bring-your-own-device (BYOD) policies were ultimately rooted in and driven by a desire to maximize employee productivity, security still trumps these aspirations. All told, the focus on securing workspaces is indicative of the need to improve both the efficacy and efficiency of protecting endpoints and workspaces, as well as the data they store and access, from compromise.

LEARN MORE

Original survey question:

When it comes to supporting the application, endpoint device, and data requirements of your organization's employees/end-users, with which of the following statements do you agree?

Survey respondents:

101 IT and business professionals responsible for mobility and workspace delivery strategies and purchase decisions.
