

56%
of organizations have adopted a
digital workspace strategy or plan
to do so in the next six months.

Digital transformation initiatives, mobile devices, and cloud consumption models are all impacting how businesses securely deliver desktops, applications, and data while maintaining an optimal end-user experience. An offshoot of these trends, digital workspaces simplify end-user access by taking an identity-centric approach to managing, delivering, and securing resources that can be accessed from untrusted devices and public networks.

LEARN MORE

Original survey question:

What are your organization's plans to adopt a solution that enables secure delivery of virtualized, Windows, web, SaaS, and mobile applications and data across all endpoint device form factors, which some refer to as a digital workspace?

Survey respondents:

399 IT professionals responsible for overseeing endpoint device, security, application, and mobile computing strategy for their organization.
